

2. The micro drone below has been developed using CAD.

- (a) Explain **two** advantages of stress testing the product using CAD simulation. 2 × [2]

Advantage 1: can identify problems before manufacturing
stress points with materials to find likely
snapping points with the drones structure.

Advantage 2: Can track overheating causes over
time to ensure longevity of the drones
internals

- (b) The UK-based designer has decided to manufacture the micro drone in the Far East.
 Explain **one** benefit **and** **one** drawback to this global manufacture. 2 × [2]

Benefit:

.....

.....

Drawback:

.....

.....
